### NEW BLUE BERRIES

GROW YOUR OWN BLUEBERRIES—PICK THEM FRESH OFF THE BUSH

Cultivated Blueberries are hardy shrubs of rare beauty; they are doubly valuable because they are fruitful and ornamental all year.

As a commercial proposition it is one of the most profitable fruits to grow. There is a big market. They make good money in a very short time, for you can begin picking the second or third season after planting.

Choose piece of ground easily supplied with moisture during dry summer months; it should not, however, at any time become water-logged. Plant in full sun if possible; they will also do well in partial shade. Be sure the soil is acid. Give only shallow cultivation, not over 2 to 3 inches deep, so as to leave the roots undisturbed.

CONCORD. Bush of upright habit, at maturity exceeding 6 feet in height. The berries are large.

JERSEY. Very large and vigorous in habit. The light blue berries are very large.

2-Yr., 12 to 18 in.

Each \$1.25 3 \$3.00 6 \$5.50 12 \$9.00

We recommend ordering both varieties so they will cross-pollinate and fruit freely.

## BIG JUICY STRAWBERRIES

**Important Notice!!** A new disease of strawberry plants (Red Stele Root Rot) is very destructive and reports of damage vary from 40 to 92 per cent reduction in fruit crop. No treatment of the disease is known and the fungus will live in the soil for several years making it unprofitable to produce strawberries on the same land where the fungus has been in the soil. This disease is spreading rapidly. **DON'T TAKE ANY CHANCE OF GETTING INFESTED PLANTS. ORDER FROM US.** Our plants are twice inspected, once in the Spring for Red Stele disease and once in the Fall for all kinds of insects and diseases that attack strawberry plants. ## NOVELTIES FROM THE OZARKS

It is delicious when eaten fresh or cured like dates, and is excellent for preserves and jam. Cooked in a sugar syrup and allowed to dry, it becomes a most tasty and palatable confection which we believe will eventually rival the date as a commercial product. ### EVERBEARING CYNTHIANA

This new Everbearing grape begins to ripen about the time the Concord does, and continues until frost. Has ripe grapes, green ones and blooms on it all the time after they begin to get ripe until the growing season is ended by frost. The best red wine grape known. We say the best because red wine made from this

variety, grown at Bushburg, Mo., about 25 miles south of St. Louis on the Mississippi River, won first prize at the World's Exposition at Vienna, Austria, as the best red wine from all nations. (This grape originated right here in Benton County, Arkansas). A very vigorous grower; for making grape arbors it is without an equal. For high, dry countries it appears to be at home as well as on the creek and river bottoms. It does not require a rich soil, but prefers a dry soil of moderate fertility. It is so sweet it is almost too rich to eat out of hand. It has a higher content of sugar than any grape known. The berries are about the size of the Delaware, while the clusters are large; color is black covered with blue bloom.

## New IMPROVED Elberta

**NEW IMPROVED ELBERTA**—The fruit is almost round, with deep red blush on the sides; it is easily 4 to 5 inches in diameter with excellent flavor. A few years ago a local fruit man gave \$5.00 for a bushel (when he could and was buying ordinary Elbertas for \$1.50 to \$2.00 per bushel).
